INTRODUCTION

Our project explains about the E-commerce Shopping Website named MyCart. This project mainly explains the various actions related to shop online. You can search various products and shuffle according to category. Our Project Includes

Modules:-

- Admin Module
- Customer Module
- Cart Module

I have developed this Application in **Java, JSP, Servlets and MySQL**. It's a web-based project so I have used **HTML, CSS, JavaScript and Bootstrap** also.

The main feature of the project is to make shopping easier. You can access this website from anywhere and everywhere.

In Admin module, admin can add the products and also view the products. Admin can view all orders which come from customer as well as see pending orders and delivered orders. Admin can view customers and contact.

In User module, user can access the website and buy products and products to cart and buy and shuffle by category. New user can register and login after that to shop. In Cart, user both can access, they can add the products and buy if they want.

SOFTWARE REQUIREMENTS

Front end: Java/J2EE technologies (Servlet, JSP), HTML, CSS, JavaScript, Bootstrap.

Back end: MySQL workbench 6.2 CE.

Middleware/Server: Apache Tomcat v8.5. IDE: Eclipse IDE for Java EE Developers

Browser: Best result on Google Chrome

Operating System: Window 10
